READ SAFETY DIRECTIONS BEFORE OPENING OR USING

ALBAUGH METSURAM 600 WG HERBICIDE

ACTIVE CONSTITUENT: 600 g/kg METSULFURON METHYL

For the control of brush and broadleaf weeds in native pastures. rights of way, commercial and industrial areas and for the control of certain broadleaved weeds in winter cereal crops as per the Directions for Use table.

IMPORTANT: READ THE ATTACHED LEAFLET/BOOKLET BEFORE USE

ALBAUGH AUSTRALIA PTY LTD Level 1, 530 Little Collins Street, Melbourne VIC 3000 Australia Tel 03 9909 7183 www.albaugh.com/au

DIRECTIONS FOR USE

Brush Applications - Restraints

DO NOT spray if rainfall is expected within 4 hours. DO NOT store the prepared spray for more than 2 days.

DO NOT store tank mixes with other products.

DO NOT apply to pastures based on *Paspalum notatum* or *Setaria* spp. as their vegetative growth will be reduced.

DO NOT treat newly sown pastures as severe damage may occur.

DO NOT use on pasture seed crops.

Aerial Application by Helicopter - Restraints

DO NOT apply if rainfall is expected within 2 hours of spraying.

DO NOT store tank mixes with other products.

DO NOT store the prepared spray for more than 2 days. ALBAUGH METSURAM 600 WG HERBICIDE + GLYPHOSATE 360 TANK MIX - Restraints

DO NOT apply if rainfall is expected within 6 hours of spraying.

DO NOT store tank mixes with other products.

DO NOT store the prepared spray for more than 2 days.

DO NOT apply to plants wet with dew or rain or if droplets run-off when plants are disturbed.

Results may be slow to appear and may not be visible for 3-6 weeks. Full brown-out may take 3-6 months.

ESTABLISHED PASTURES AND PASTURE RENOVATION - Restraints

DO NOT spray if rainfall is expected within 4 hours.

DO NOT store the prepared spray for more than 2 days DO NOT store tank mixes with other products.

DO NOT apply to newly sown pastures as severe damage may result.

DO NOT use on crops grown for pasture seed.

DO NOT apply to weeds under stress or that are not actively growing.

APPLICATION IN WINTER CEREAL CROPS

DO NOT apply to crops under stress

DO NOT spray if rainfall is expected within 2 hours.

DO NOT store the prepared spray for more than 2 days

DO NOT store tank mixes with other products. DO NOT apply to crops before the three leaf stage when used post emergent.

DO NOT use on flood or furrow irrigated crops.

ALBAUGH METSURAM 600 WG HERBICIDE AND MIXTURE WITH GLYPHOSATE FALLOW/PRE-PLANT KNOCKDOWN - Withholding Periods Albaugh Metsuram 600 WG Herbicide. Albaugh Metsuram 6 WG Herbicide + Glyphosate - NOT REQUIRED WHEN USED AS DIRECTED

GENERAL INSTRUCTIONS - BRUSH APPLICATIONS, ESTABLISHED PASTURES AND PASTURE RENOVATION Albaugh Metsuram 600 WG Herbicide is a selective herbicide which is rapidly absorbed by root and

eaves. Always add a surfactant/wetting agent.

est results are achieved when:

- Application is made to actively growing plants which are not stressed by any factors such as dry weather conditions, waterlogging, etc.
- Plants to be treated are thoroughly covered. This is essential to achieve maximum herbicide uptake. Regrowth may occur if the product is applied when plants are stressed or if complete spray coverage not achieved. If regrowth does occur, re-treatment at the rates on this label is recommended. For ackberries re-treatment should only be undertaken if plants are at least 1 metre tall. This may not e until 2 year after the initial application. Legumes will be removed from pasture if over-sprayed with Albaugh Metsuram 600 WG Herbicide. Legumes are extremely sensitive to Albaugh Metsuram 600 WG Herbicide and will be removed from the pasture if over sprayed. Introduced grass species may be severely damaged if over-sprayed. Application to weeds that are not actively due to adverse inditions may result in weeds only being stunted or suppressed. Some grasses will be damaged pasture sprayed with this product and biomass production may be reduced for several months. f weeds have been previously sprayed with other herbicides of if the weeds have been burned or slashed ensure 2 years have elapsed before treating with Albaugh Metsuram 600 WG Herbicide. It is recommended that this product not be applied to bushes bearing mature blackberries due to the collection of blackberries for food purposes. Some temporary yellowing and some stunting may occur when used on Perennial Phalaris and/ or established Perennial cocksfoot. ALL grasses and legumes can be damaged and/or removed by a Albaugh Metsuram/Glyphosate mixture. The following weeds will not be controlled:

(Hordeum leporinum), Brome grass (Bromus unioloides), Silvergrass (Vulpia spp.), Winter grass (Poa annua). Best results will be achieved if weeds are allowed to recover from grazing prior to herbicide application to allow for adequate uptake of the product. Sorrel and Docks particularly require new

INSTRUCTIONS SPECIFIC TO ESTABLISHED PASTURES AND PASTURE RENOVATION

Some sorrel seedlings may germinate after the break the following year. Ungerminated clover will not be affected but seed set of clover in the year following application will be significantly reduced. If seed banks are not large, it may be necessary to re-sow clover. For Pasture Topping situations this product may be mixed with alvohosate but ensure crop rotation recommendations are observed. Refer to the Directions of Use for each Target weed on each product label.

Albaugh Metsuram 600 WG Herbicide is a dry flowable granule which must be mixed with

Always add a wetting agent/ surfactant. (See "Use of surfactant/wetting agent" below)

- Partially fill the spray tank with water.
- 2. With the agitation system engaged, add the required amount of product (as per Directions of Usi Table) to the tank using only the measuring device provided.
- 3 Add the remained of the water

4. Always maintain agitation to keep the product in suspension. If the spray solution is allowed to stand, thoroughly re-agitate before using.

Use of surfactant/ wetting agent

Albaugh Metsuram 600 WG Herbicide alone - It is important that a surfactant/ wetting agent is ALWAYS used with this product. If no specific agent/surfactant is recommended in the Directions for Use table use a non-ionic surfactant (100%) at 100mL/100L of final spray volume.

Albaugh Metsuram 600 WG Herbicide tank mixed with Glyphosate - Use a non-ionic surfactant when mixing with glyphosate herbicide. In some tank mix solutions the use of an organosilicone penetrant is recommended. This recommendation must be strictly followed in order to achieve Many crop species are sensitive to metsulfuron methyl. The product is broken down in the soil

Gas gun applications - An organosilicone penetrant should be added at the rate of 10mL/5L or 200mL/100L of final spray volume.

Where a mineral spray oil is recommended use 1L/100L of final spray volume (ie 1% volume/ volume). A non-ionic surfactant should still be used with this mixture.

Always read the instructions on the companion product label when tank mixing.

Application Equipment

Albaugh Metsuram 600 WG Herbicide may be applied by air, handgun, boom spray of gas gun according to the Directions for Use table.

Handgun - Ensure complete and uniform coverage of all canes and foliage. Pressures of 550 - 750 kPa (80 - 100 psi) are recommended depending on size of bushes and target species. As an example Use No 4 or 5 spray nozzle for individual bushes or broadleaf weeds less than 1 metre high. Use No 5 or 6 spray nozzle for bushes 1-2m high and No 7 or 8 spray nozzle for large bushes 2-3 metres high or for bushes with a large diameter. When using 3g Albaugh Metsuram 600 WG Herbicide + 400mL of Glyphosate 360 Herbicide pressures of greater than 800 kPa should be used to assist penetration. NOTE: For blackberry regrowth use the large spray nozzle/ high volume with as wide a cone setting as possible. Use even, side by side spray pattern moving from the base to the top of the bush. For blackberries it is important that runners at the side and top of the bush are treated and that spray penetrates larger bushes to wet foliage and canes.

Boom Spray - Ensure the boom is properly calibrated to a constant speed or rate of delivery for thorough coverage and uniform spray pattern. Fan nozzles using pressures of 240 to 280 kPa are recommended. Adjust the boom height to ensure correct spray overlap. Apply in a minimum of 150L prepared spray per hectare. Increase to 200L/ha or more for dense stands.

Gas Gun - Ensure thorough coverage. The use of a suitable dve is recommended to allow the operator to see which plants have been treated.

Aerial Application - (by helicopter only) Use a properly calibrated helicopter using the half overlap opposite pass technique. Apply a minimum of 100L/ha on blackberries and 60L/ha on Mimosa pigra up to a maximum of 200L prepared spray per hectare. Use a VMD of 300 microns. High temperatures and/or low humidity may cause excessive evaporation of droplets and may reduce results. Where bushes are large or terrain is steep, higher water volumes are necessary to ensure adequate coverage. Avoid spraying in conditions which favour temperature inversions or in still conditions. Turn off boom when passing over creeks, dams or waterways. Avoid spraying where drift can move onto crop areas that are likely to be planted to crops and non target pastures as injury may occur. Do not apply when temperatures exceed 30°C. (except when treating M. pigra).

Tank mixes with Glyphosate Herbicide

In certain situations such as the presence of harder to kill species or in follow-up treatment situations

a tank mix with Glyphosate may provide improved weed control (see Directions for Use table).

This product is compatible with glyphosate formulations and commonly used pasture herbicides such as MCPA Amine, MCPA Ester, 2.4-D Amine, dicamba, Clopyralid (300g/L), Fluroxypyr 200, and commonly used insecticides such as chlorpyrifos and omethoate. Always refer to the companion product label for instructions/restrictions.

Crop Rotation Recommendations

mainly by chemical hydrolysis and to a lesser degree by soil microbes. Other factors which affect breakdown are soil pH, soil moisture and temperature. Breakdown is faster in warm, wet acid soils and slowest in alkaline, cold, dry soils.

Legumes will be removed from pasture if they are over sprayed with the product. Other species which are sensitive to metsulfuron methyl are:

Barley, Canola, Cereal Rye, Chickpeas, Faba Beans, Japanese Millet, Linseed, Lupins, Lucerne,

Maize, Medics, Oats, Panorama Millet, Peas, Safflower, Sorghum, Soybeans, Sub Clover, Sunflower, Triticale, Wheat, White French Millet.

The area sprayed with Albaugh Metsuram 600 WG Herbicide may be replanted to the specified pasture species after the interval in the following table:

oil pH*	Pasture Species	Rate g/ha	Minimum Rainfall	Minimum Re-crop Inter
.5 and	SubClover ² and Haifa	5	150mm	12 weeks
elow	White Clover	10		20 weeks
		15

		15		Bioassay

Sub Clover varieties: Junee, Karridale, Seaton Park, Trikkala

6.6 and | Cocksfoot and Phalaris

Tolerance of species should be determined on a small scale before sowing commercial areas

Bioassay³

CRITICAL COMMENTS

- Soil pH is determined by laboratory analysis using 1:5 water suspension method For rates higher than 15 g/ha the following applies:
- For soils with a pH below 7 (1:5 soil:water method) a minimum of 12 months should elapse before over sowing treated areas with grasses or legumes. It is suggested that a small area be
- oversown 1-2 months prior to the planned time to check for possible harmful residues. For soils with pH greater than 7 DO NOT replant until a company representative has been

GENERAL INSTRUCTIONS - CEREAL CROPS

Albaugh Metsuram 600 WG Herbicide is a selective herbicide which can be used in Cereal crops at the early post emergence stage of the crop (3 leaf to before booting stage). It may also be applied before planting the crop je pre-plant. Best results are obtained if weeds are small (no larger than 5cm in height or diameter) and actively growing. To achieve good weed control, it is preferable that rainfall wets the soil to a depth of 5 to 7.5cm within 4 weeks of application. If application is not made when conditions and weed growth are optimum, results may be slow to appear and some weeds may only be suppressed or stunted.

For post emergent application, the product will remain in the soil for a period of time. The soil persistence will depend on environmental conditions such as soil pH, moisture, temperature and

Breakdown is faster in warm, wet acid soils and slowest in alkaline, cold, dry soils. This product does NOT provide acceptable residual control.

Do not apply to the wheat varieties Miling, Jacup, King or Harrier.

Do not apply to crops undersown with legumes as legumes will be seriously affected by the product. Should the crop have been treated with another sulfonylurea herbicide eq Chlorsulfuron, consult your local representative or Department of Agriculture before application of Albaugh Metsuram 600 WG as crop injury may occur. Do not apply to crops that are stressed by any factor such as adverse environmental conditions, waterlogging, drought, frost, poor nutrient status, extreme acid or alkaline soil conditions, insect or nematode damage. Crop injury may occur if the product is applied to these crops. If the crop is stressed after application of the herbicide, crop yellowing and slow growth may occur but the final yield is normally unaffected as the crop will recover. Application to soils with pH 5.5 or less may result in some crop retardation, especially if the crop

Application Equipment

For control of weeds in winter cereal crops the product may be applied by ground or air.

Ensure the boom is properly calibrated to a constant speed or rate of delivery for thorough

coverage and uniform spray pattern. Avoid overlapping and shut off boom while starting, turning, slowing or stopping as injury to the crop may occur. Apply in a minimum of 50L prepared spray/ha

Apply in a minimum of 20L/ha. Application in higher water volumes may improve weed

Avoid spraying in conditions which favour temperature inversions, still conditions, or in winds

likely to cause drift onto sensitive crops or fallow areas to be planted to sensitive crops. Turn off boom

stand, thoroughly re-agitate before using. when passing over creeks, dams or waterways. The use of Micronair equipment is not recommended as the fine droplets emitted may lead to

Use of surfactant/ wetting agent

liquid fertiliser. Do not add surfactants and check with the Department of Agriculture on compatibility Always add a non-jonic surfactant/ wetting agent at the rate of 0.1% (active constituent) of final

The use of spraying oils is NOT recommended.

NOTE: DO NOT add a surfactant/wetting agent when tank mixing with terbutryn or diuron.

Albaugh Metsuram 600 WG Herbicide is compatible with most commonly used broadleaf

MCPA Amine, Diuron Flowable, 2,4-D Amine, Agtryne, Broadstrike, Bromoxynil 200g/L plus MCPA 200g/L combination product, Eclipse, Terbutryn, MCPA Ester, IVE MCPA, Jaguar, Tigrex, Tordon 242. Tordon 75D, Metribuzin, Clopyralid 300, Dicamba, Fluroxypyr 200, glyphosate

The product is also compatible with commonly used insecticides such as chlorpyrifos and omethoate. Some temporary crop yellowing may occur with these mixtures. Other mixtures should be tested on a small scale before large areas are treated.

NOTE: The compatibility of Albaugh Metsuram 600 WG Herbicide with grass herbicides varies between products and weed species (refer table below). DO NOT mix with Mataven 100.

	В	IOLOGICAL COMPATIBILI	TY] [

Notes on Albaugh Metsuram / Diclofop methyl or Albaugh Metsuram / Tristar mixtures:

- a) some reduction in grass weed control can be expected
- In heavily weed infested areas control may be inadequate (Victoria and Tasmania only)
- c) significant reduction in grass weed control should be expected (SA only)
- d) Mixtures of Albaugh Metsuram 600 WG and Diclofop methyl/Tristar 1 are not recommended in WA as these mixtures will result in significant reduction in grass weed control and/or crop damage.

- he product is a dry flowable granule which must be mixed with clean water.
- Partially fill the spray tank with water.
- With the agitation system engaged, add the required amount of product (as per Directions for Use table) to the tank using only the measuring device provided.
- . Add the remainder of the water.

4. Always maintain agitation to keep the product in suspension. If the spray solution is allowed to

If tank mixing with another product, ensure Albaugh Metsuram 600 WG is in suspension before

adding the other product to the tank. If using in conjunction with liquid fertilisers, slurry the product in water before mixing the slurry into the

Crop Rotation Recommendations

Many crop species are sensitive to metsulfuron methyl. The minimum re-cropping intervals are given in the table below. Do not rotate crops other than those listed below to land previously treated with Metsulfuron methyl. It is advisable to determine crop tolerance on a small scale before sowing larger areas.

MINIMUM RE-CROPPING INTERVAL					
*	10 days	6 weeks	9 months	14 months	
5	Wheat	Barley, Cereal Rye, Triticale	Canola, Chickpeas, Faba Beans, Linseed, Lucerne, Lupins, Medics**, Oats, Peas, Safflower, Subterranean, Clover**	Japanese Millet, Maize, Panorama White, Millet, French Millet, Sorghum, Soybeans, Sunflower	
above	Tolerance of crops (grown to maturity) should be determined on a small scale, in the previous season, before sowing into larger areas.				

- Soil pH is determined by laboratory analysis using 1:5 water suspension method.
- Including natural regeneration of medics and subclover.

GENERAL INSTRUCTIONS RELATING TO ALL USES FOR ALBAUGH METSURAM 600 WG HERBICIDE Sprayer Cleanup Many plant species are sensitive to low concentrations of Albaugh Metsuram 600 WG Herbicide. For

this reason it is important to thoroughly clean spray tanks after use as small quantities of product remaining in the tank may cause injury to desirable pastures and crops if the tank is used for other spraying procedures.

- The following method of tank cleanup should be used: Drain tank and flush tank, boom, and hoses for at least 10 minutes.
- Fill the tank with clean water and add 300mL of household bleach (containing 4% chlorine) pe
- engaged, then drain.
- Repeat Step 2.
- Nozzles and screens should be removed and cleaned separately.
- Remove traces of chlorine bleach by rinsing the tank thoroughly with clean water and flushing hoses and hoom

Flush through the hoses and boom, allow to stand for 15 minutes with agitation system.

WARNING: DO NOT use chlorine bleach with ammonia. It is important that liquid fertilisers containing ammonia be rinsed from the application equipment before adding a chlorine bleach solution. If traces of ammonia are present it may react with the chlorine bleach releasing a gas with a musty chlorine odour which may cause eye, nose, throat and lung irritation, DO NOT clean equipment regulations. DO NOT burn empty containers or product.

RESISTANT WEEDS WARNING

GROUP 2 HERBICIDE

Albaugh Metsuram 600 WG Herbicide is a member of the sulfonyl urea group of herbicides. Albaugh Metsuram 600 WG Herbicide has the ALS inhibitor mode of action.

For weed resistance management Albaugh Metsuram 600 WG Herbicide is a Group 2 Herbicide. Some naturally occurring weed biotypes resistant to Albaugh Metsuram 600 WG Herbicide and her ALS inhibitor herbicides may exist through normal genetic variability in any weed population. FIRST AID e resistant individuals can eventually dominate the weed population if these herbicides are used peatedly. These resistant weeds will not be controlled by Albaugh Metsuram 600 WG Herbicide or SAFETY DATA SHEET v other ALS inhibitor herbicide. Since the occurrence of resistant weeds is difficult to detect prior use. Albaugh Australia Ptv Ltd accepts no liability for any losses that may result from the failure of paugh Metsuram 600 WG Herbicide to control resistant weeds. TERMS AND CONDITIONS OF SUPPLY, SALE AND USE

OTECTION OF WILDLIFE, FISH, CRUSTACEANS AND ENVIRONMENT

NOT contaminate streams, rivers or waterways with the chemical or used containers. O NOT apply to weeds growing in or over water.

O NOT spray across open bodies of water.

ROTECTION OF LIVESTOCK

There is a nil withholding period for this product and stock may continue to graze where the product has been used in pasture situations. It is recommended that stock are removed from the pasture for about 3 days to ensure product efficacy. Certain plants such as bracken are naturally toxic to stock. When toxic plants are present, it is recommended that grazing be delayed until complete browning of treated plants has occurred.

PROTECTION OF CROPS, NATIVE AND OTHER NON-TARGET PLANTS

Do not apply or drain or flush equipment on or near desirable trees or other plants or on areas where their roots may extend or in locations where the chemical may be washed or moved into contact with their roots. Do not apply under weather conditions, or from spraying equipment, that may cause drift APVMA Approval No. 81100/141580 onto nearby susceptible plants/crops, cropping lands or pastures.

STORAGE AND DISPOSAL

Keep out of reach of children.

DO NOT store the prepared spray for more than 2 days.

DO NOT store tank mixes with other products.

Store in the closed original container in a cool, well ventilated area. Do not store for prolonged periods in direct sunlight.

Triple or preferably pressure rinse containers before disposal. Add rinsings to spray tank. Do not dispose of undiluted chemicals on site. If recycling, replace cap and return clean containers to recycler or designated collection point. If not recycling, break, crush, or puncture and deliver empty packaging

for appropriate disposal to an approved waste management facility.

If an approved waste management facility is not available, bury the empty packaging 500mm below the surface in a disposal pit specifically marked and set up for this purpose clear of waterways. desirable vegetation and tree roots, in compliance with relevant Local, State or Territory government

SAFFTY DIRECTIONS

Harmful if swallowed. Will irritate the eyes and skin. Avoid contact with eyes and skin. When opening the container and preparing spray, wear elbow-length PVC gloves and goggles. If applying by hand wear cotton overalls, over normal clothing, buttoned to the neck and wrist and a washable hat and elbow length PVC gloves. If product on skin, immediately wash area with soap and water. If product in eyes, wash out immediately with water. Wash hands after use. After each day's use, wash gloves, goggles and contaminated clothing.

If poisoning occurs, contact a doctor or Poisons Information Centre (Phone Australia: 131 126).

Additional information is listed in the safety data sheet (SDS) which is available from the supplier and accessible from the Albaugh website albaugh.com/au

Many factors can affect or influence the activity of this product, including, but not limited to: weather and soil conditions, crop variety, treatment timing, water volume, application rates, spraying techniques, crop rotation, regional factors, and the occurrence and development of strains resistant to the active ingredient. Under certain circumstances, changes in activity or crop damage can occur. The manufacturer or supplier is unable to accept liability in these circumstances. All goods supplied by us are of a high grade and we believe them to be suitable for the purpose for which we expressly supply them: but we cannot exercise any control over their mixing, use or application which may affect the performance of the goods. All conditions and warranties statutory or otherwise as to the quality or fitness for any purpose of our goods are excluded and no responsibility will be accepted by us for any damage or injury whatsoever arising from their storage, handling, application, or use. These conditions cannot be varied by our staff, agents, or the re-sellers of the product whether or not they supervise or assist in the use of such goods.
