

FRENTA® 750 WG

**BROAD-SPECTRUM, CONTACT FUNGICIDE WITH ACTIVITY
AGAINST A WIDE RANGE OF FUNGAL PATHOGENS.**

Albaugh FRENTA® 750 WG Fungicide is a broad-spectrum fungicide labeled for use on outdoor crops, turf, and ornamentals. Optimum disease control is achieved when the fungicide is applied in a regularly scheduled preventative spray programme. The addition of an agricultural surfactant will enhance fungicide performance by providing a more uniform spray deposit, increased foliar redistribution, and enhanced fungicide retention during periods of wet weather. Under low disease conditions, minimum label rates per application can be used while maximum label rates and the minimum interval may be used for severe or threatening disease conditions.

For the control of certain fungus diseases of fruit, field crops, tobacco, turf, vegetables and ornamentals as per the Directions for Use Table.

PRODUCT OVERVIEW

- Unique mode of action making it an excellent disease resistance management tool.
- Grapes: For blackspot control apply every 10-14 days starting at bud burst. If downy mildew is expected, continue spray programme at intervals of 10-14 days until the threat of disease has passed. Use the shorter spray interval during weather conditions favourable to disease development.
- Effective in protecting against a wide range of fungal pathogens, including leaf spots, rusts, scabs, early blight, late blight, walnut blight, and downy mildew, in a range of crops.
