

2,4-D LV 6

HIGH CONCENTRATION PHENOXY HERBICIDE FORMULATION THAT CONTROLS A VARIETY OF BROADLEAF WEEDS IN A VARIETY OF CROPS.

Best results are obtained when product is applied to young, succulent weeds that are actively growing. The lower recommended rates will be satisfactory on susceptible annual weeds. For perennial weeds and conditions such as the very dry areas of the western states, where control is difficult, the higher recommended rates should be used. When 2,4-D LV 6 is used for weed control in crops, growth stage of the crop must be considered. Some plants and weeds, especially woody varieties, are difficult to control and may require repeat applications.

Application rates should be 1-5 gallons of total spray by air or 5-25 gallons by ground equipment, unless otherwise directed. In either case, use the same amount of 2,4-D recommended per acre.

PRODUCT FEATURES

- A low-volatile formulation that has excellent compatibility with a variety of fertilizer solutions.
- Effective in controlling more than 95 broadleaf weeds when applied at the young and active growing stage.
- More effective at temperatures below 50° F compared to 2,4-D amine formulations.
- Broad label uses including forestry, grasses grown for turf, fresh-market potatoes and various non-crop applications.
- High 2,4-D ester concentration allows for easy handling and storage.

Applicators must follow all state and local pesticide drift requirements regarding application of 2,4-D herbicides. Where states have more stringent regulations, they must be observed. NOT REGISTERED FOR USE IN CALIFORNIA.

2,4-D LV 6 is NOT approved for application to 2,4-D tolerant GMO crops, including cotton and soybeans.
