

NON-SELECTIVE HERBICIDE

THUNDER MASTER®

CONTROLS BROADLEAF AND GRASSY WEEDS IN ROUNDUP READY® SOYBEANS AND ALFALFA, OR AS A FALL OR SPRING WEED BURNDOWN IN CLEARFIELD® CORN.

Thunder Master® provides burndown and residual control of many broadleaf and grass weeds in soybeans and Roundup Ready® alfalfa. May be applied postemergence to Roundup Ready soybeans and Roundup Ready alfalfa for season-long weed control, or as a fall or spring burndown in CLEARFIELD® corn. Thunder Master is effective for difficult-to-control weeds common to no-till production, including marestail. When applied postemergence, Thunder Master not only controls existing broadleaf and grass weeds, it also provides control of susceptible weeds that may emerge after application.

PRODUCT FEATURES

- Burndown plus the residual for control of many broadleaf and grass weeds in Roundup Ready soybeans and alfalfa.
- Two modes of action to manage herbicide resistance.
- Flexibility of use, may be applied preplant burndown, and early postemergence.
- Apply postemergence in Roundup Ready soybeans and Roundup Ready alfalfa for season-long control.
- Excellent residual control, resulting in fewer trips across the field.

See label for complete application guidelines and restrictions.

ACTIVE INGREDIENTS

2.7 lbs/gal imazethapyr +
2.0 lbs/gal glyphosate

HRAC GROUPS

2, 9

FORMULATION

Soluble concentrate

REI

48 hours

COMPARE TO

Extreme®

MODES OF ACTION

ALS inhibitor,
EPSP synthase inhibitor

SIGNAL WORD

Warning

PACKAGING

2 x 2.5 gal, 30 gal, NR 265, Bulk

EPA REG NUMBER

42750-147 | AD060716

THUNDER MASTER®

FREQUENTLY ASKED QUESTIONS

How should I apply Thunder Master herbicide for best results?

Postemergence

- A non-ionic surfactant and spray grade ammonium sulfate fertilizer must be added to the spray solution for optimum weed control activity. *Refer to MIXING INSTRUCTIONS on page 6-7 of the product label for specific instructions.*
- For maximum weed control, cultivate 7-10 days following a postemergence application of Thunder Master. This timely cultivation will enhance residual weed control, especially under dry conditions.
- Apply to actively growing weeds.
- Apply a minimum of one hour before rainfall or overhead irrigation.
- Use only flat-fan nozzles for postemergence applications.
- Delay application for 48 hours from the time the temperature increases above 50F, if air temperature has been below 50 F for 10 hours or more to improve weed control and reduce crop response.

Spraying Instructions

- Ground applications should be made in 10 or more gallons of water per acre with a recommended spray pressure of 20-40 psi. Use a minimum of 20 gallons of water per acre when applying Thunder Master to minimum or no-till crops. Use a higher gallonage for fields with dense vegetation or heavy crop residue.
- If applying with a low-volume sprayer, apply a minimum of 10 gallons per acre with nozzle pressure between 40-60 psi for optimum coverage.
- Aerial applications should be made in five or more gallons of water per acre. When applied postemergence, the addition of non-ionic surfactant AND fertilizer solution are required for optimum weed control.
- *Refer to label for specific application information by crop.*

With the resistance that is so prevalent with this class of chemistry, what does Thunder Master bring to the table?

- Residual grass control, as well as control of regionally challenging broadleaf weeds using two active ingredients.
